2022 Guide to OCR, Invoice Scanning & Data Capture

The Invoice Capture Challenge

Third party reports from the field confirm the challenge North American organizations face when capturing invoice data. 80% to 90% of invoices received by both medium and large size companies is either paper or email.

As you can see from the charts presented here, even with the advent of technologies such as EDI and network portals, the bulk of both invoice receipt and invoice data entry revolves around paper and email.

So how are organizations tackling invoice capture? Not very efficiently:

- Paper invoices are handled and entered into accounting systems manually
- Emailed invoices from suppliers are printed out and manually keyed into the ERP
- Invoice scanning is done with legacy OCR technology that has limited functionality, depth, and integration capabilities
- For growing companies, larger invoice volumes has meant adding staff
- Most ERP solutions do not have the functionality to automate these areas

Most organizations say manual data entry and the high volumes of email and paper invoices they receive are a huge challenge

Paper & Email Dominates in North America

How Companies Receive Invoices

How Companies Enter Invoice Data

Capturing Paper & Image Data with OCR

Formats Suited to OCR

- Paper Invoices
- Visual Digital Format Invoices
 - JPG, PNG, GIF (picture formats)
 - TIF (from scanning software)
 - PDF containing a scanned image

Because paper invoices and invoices sent as an image have no data layer, each invoice has to be scanned by Optical Character Recognition, or OCR. The collected data is then input to the ERP or accounting system.

Resource Implications

Manually capturing essential data fields from emailed or paper invoices is time consuming and resource intensive. AP departments handle mailed or emailed invoices in various ways, with most of them keying in the data manually, a time consuming and error-prone process at best.

Conventional or legacy OCR systems often require manual input in order to function because of the time and effort for both field mapping and the collecting of data after it has been captured.

The latest advances in OCR technology reduces the amount of time involved in legacy OCR, introducing automation and intelligent data collection and retrieval.

The Evolution of Invoice for AP

Traditional OCR – 2000s

OCR is used to process either paper or emailed invoices, and the invoice layouts are manually field-mapped. There are often issues with integration and a lack of workflow.

Advanced OCR – 2014

OCR is able to detect the invoice type based on its layout and sorts it accordingly.

Rillion Capture – 2022

The Rillion Capture solution teaches itself to identify supplier invoices based on their layouts and then automatically stores that information for future reference.

Rillion Capture also intuitively maps the data fields in each invoice using intelligent tags, called “intellitags”, as identifiers, and stores them in a database. Because of the use of automation and smarter processing, 95% accuracy rates are achievable with the Rillion Capture solution.

2022

95% accuracy rates are achievable with Rillion Capture technology

Capturing Electronic Format Invoices

Formats Suited to Digital Capture

- Digital/Electronic Invoice
 - Spreadsheet (Excel)
 - Word (.doc)
 - HTML
 - Data PDF
 - EDI (EDIFACT)
 - CSV

A digital or electronic invoice is a document that exists in a digital format (composed of data in the form of binary digits). It's output by a supplier's ERP system as either structured or unstructured.

Structured Digital Format

Invoice data can be captured by capture technology with structured digital format invoices such as: XML, EDI, Data PDF, HTML, CSV, Spreadsheet, Word (.doc)

Unstructured Digital Format

Invoice data cannot be automatically read from unstructured digital format invoices. However, most ERPs can output a structured digital format, such as a PDF. The majority of invoices received by email in 2022 are structured invoices in one of the formats listed above.

The Evolution of Digital Data Capture for AP

Traditional EDI – mid 1960s

Companies have their own form of electronic data interchange until the establishment of the ANSI X12 EDI standard.

Web-based Portals – 1990s

Online submission of individual invoices as well as EDI file uploads, including CSV, PDF, and XML formats.

Rillion Capture – 2022

A digital format invoice is sent to a designated email address where capture automation and AI instantly reads the data and extracts it, forwarding the invoice data to the buyer's ERP.

Because the electronic file has a data layer that reflects exactly what was input, the information transfer is 100% accurate.

Invoice processing happens automatically and within minutes of receipt.

2022

Accuracy rates of 100% thanks to the data layer inside each electronic format invoice

Capture Methods Compared for North American organizations

Invoice Format	Speed to Set up	Infrastructure Changes	Cost to buyer	Cost to supplier	Data Accuracy	On-Boarding Rates	Technology
PDF/Electronic	Fast	None	¢	Free	100%	High	Rillion Capture
Email	Fast	None	¢	Free	95%	High	Rillion Capture
Paper	Fast	None	¢	Postage	95%	High	Rillion Capture
Portal	Fast	Some	\$\$	\$\$	Low	Low	Network
EDI/XML	Slow	Many	\$\$\$	\$\$\$	100%	Low	EDI

For organizations that want to capture invoice data digitally, there are a few things to consider before choosing the best capture solution.

The business case is based on considerations such as:

- the time it takes for set up
- infrastructure changes and I.T. resources
- the cost to the buyer
- the cost to the supplier
- data accuracy
- on-boarding rates

Speed to Set Up

How long will it take to set up and implement the technology to capture invoice data efficiently?

Rillion Capture is fast because the supplier only has to send the email invoice to a designated email address. Rillion Capture also accepts scanned documents, so the supplier can continue to send paper invoices if they need to.

Infrastructure Changes

What infrastructure is necessary on the supplier's end? Rillion Capture has no infrastructure requirements on the supplier's end, because most ERPs can output an invoice in PDF or other electronic format.

Cost to the Buyer

What is the cost to your organization? Things to consider are user licenses and software costs. The cost for Rillion Capture is low because pricing is based on volume.

Cost to the Supplier

Rillion Capture is free for suppliers.

Data Accuracy

What data accuracy can you expect? For paper invoices, 95% accuracy rates. For electronic formats, 100% accuracy rates. Encouraging suppliers to send an electronic format instead of paper benefits both parties - lower costs, accuracy, and faster payment cycles.

On-Boarding Rates

How many suppliers will on-board to your invoice capture solution? On-boarding rates for Rillion Capture are high because there is no cost to the supplier, and all suppliers need for emailed invoices is a designated email address.

2022

No costs incurred by suppliers

Rillion Capture Solution Workflow

Rillion provides more than just invoice data capture.

Once the invoice data has been captured, the Rillion solution provides approval workflow, PO matching, and a searchable invoice archive.

Approval Workflow

Invoices are gathered into a central dashboard, and automatically sent to users to review and approve. Automatic notifications for approval are sent to those designated.

PO Matching (Optional)

Rillion automates the matching of invoices, purchase orders, and goods receipts. If an invoice matches all of the criteria of an associated PO the system transfers the invoice directly to the ERP for recording. Exceptions are flagged and sent to approvers for reconciliation.

Archive and Audit

Invoices are stored in the cloud for searching and archiving purposes. A complete time-stamped audit trail is provided for external audits and internal investigations.

Rillion's AP Automation Software integrates to many popular ERPs and accounting systems.

Here are some of them:

96%

User Satisfaction Ratings

We make our clients' jobs easier by letting them do more, with less. We call ourselves AP Automation experts, providing the proper tools to allow finance professionals to transform how they manage invoices - from data capture and requisitions, to invoice matching and approvals. We come from over 25 years

of experience providing the best customer service in the industry resulting in a more efficient invoice process and peace of mind to Accounts Payable. To date, Rillion has supported over 3,000 companies across over 50 countries. For more information and to learn more visit www.rillion.com
